# SPECIFICATIONS

Items		Contents						
		AV-29LS	AV-29LS-AU	AV-29LH	AV-29LX	AV-29LX-A	AV-29LX-AU	AV-2908TEE
Dimensions (W × H × D)		73.2cm × 58.8cm × 51.8cm						
Mass		47kg						
TV RF System		B, G, I, D, H, K1, M						
Colour System	TV Mode	PAL / SECAM / NTSC3.58 / NTSC4.43						
	VIDEO Mode	PAL / SECAM / NTSC3.58 / NTSC4.43						
Stereo System		A2/NICAM (B / G, I, D / K) System			Playback Only			
Teletext system FLOF(Fastext), WST(World Standard Text)		○		—			○	
Receiving Frequency	VHF (VL)	46.25MHz – 140.25MHz			(AU0 – S6)			
	VHF (VH)	147.25MHz – 423.25MHz			(S7 – S36)			
	UHF	431.25MHz – 863.25MHz			(S37 – CHINA 57)			
	CATV	● Cable TVs of Mid (X-Z, S1-S10) Super (S11-S20) & Hyper (S21-S41) bands receivable						
Intermediate Frequency	VIF Carrier	38.0MHz						
	SIF Carrier	31.5MHz (6.5MHz)						
		32.0MHz (6.0MHz)						
		32.5MHz (5.5MHz)						
		33.5MHz (4.5MHz)						
Colour Sub Carrier Frequency		PAL (4.43MHz), SECAM (4.40625MHz / 4.25MHz) NTSC (3.58MHz / 4.43MHz)						
Aerial Input Terminal		75Ω Unbalanced						
Power Input		AC110 – 240V, 50 / 60Hz						
Power Consumption		172W (Max.) / 108W (Avg.)		130W,1.1A (at 220V)	172W (Max.) / 108W (Avg.)			
Picture Tube		Visible size : 68cm measured diagonally						
High Voltage		32kV +1/-1.5kV (at cut-off in service mode)						
Speaker		5 × 12cm   Oval type ×2						
Audio Output		7W ×2						
Video / Audio Input (1 / 2 / 3)		Video(1,3)   : 1Vp-p, 75Ω (RCA pin jack) Audio(1,2,3) : 500mVrms ( -4dBs ), High Impedance (RCA pin jack) S-Video ( Input 1 Over ) [Only for AV-29LS-AU, AV-29LX-AU] Y       : 1Vp-p Positive (negative sync provided, when terminated with 75Ω) C       : 0.286Vp-p (burst signal, when terminated with 75Ω) Component Input ( Input 2 ) Y       : 1Vp-p positive (negative sync provided, when terminated with 75Ω) Cb/Cr   : 0.7Vp-p 75Ω						
Video/Audio Output		1Vp-p, 75Ω (RCA pin jack) 500mVrms(-4dBs) Low impedance (400Hz when modulated 100%) (RCA pin jack)						
Remote Control Unit		RM-C352-1C		RM-C353-1C	RM-C357-1C			RM-C355-1C
		(Battery size: AA/R06/UM-3 × 2)						

*Design & specifications are subject to change without notice.*

# SAFETY PRECAUTIONS

1. The design of this product contains special hardware, many circuits and components specially for safety purposes. For continued protection, no changes should be made to the original design unless authorized in writing by the manufacturer. Replacement parts must be identical to those used in the original circuits. Service should be performed by qualified personnel only.
2. Alterations of the design or circuitry of the products should not be made. Any design alterations or additions will void the manufacturer's warranty and will further relieve the manufacturer of responsibility for personal injury or property damage resulting therefrom.
3. Many electrical and mechanical parts in the products have special safety-related characteristics. These characteristics are often not evident from visual inspection nor can the protection afforded by them necessarily be obtained by using replacement components rated for higher voltage, wattage, etc. Replacement parts which have these special safety characteristics are identified in the parts list of Service manual. **Electrical components having such features are identified by shading on the schematics and by (Δ) on the parts list in Service manual.** The use of a substitute replacement which does not have the same safety characteristics as the recommended replacement part shown in the parts list of Service manual may cause shock, fire, or other hazards.
4. **Don't short between the LIVE side ground and ISOLATED (NEUTRAL) side ground or EARTH side ground when repairing.**  
Some model's power circuit is partly different in the GND. The difference of the GND is shown by the LIVE : ( ⊥ ) side GND, the ISOLATED (NEUTRAL) : ( ⊕ ) side GND and EARTH : ( ⊕ ) side GND. Don't short between the LIVE side GND and ISOLATED (NEUTRAL) side GND or EARTH side GND and never measure with a measuring apparatus (oscilloscope etc.) the LIVE side GND and ISOLATED (NEUTRAL) side GND or EARTH side GND at the same time.  
If above note will not be kept, a fuse or any parts will be broken.
5. If any repair has been made to the chassis, it is recommended that the B1 setting should be checked or adjusted (See ADJUSTMENT OF B1 POWER SUPPLY).
6. The high voltage applied to the picture tube must conform with that specified in Service manual. Excessive high voltage can cause an increase in X-Ray emission, arcing and possible component damage, therefore operation under excessive high voltage conditions should be kept to a minimum, or should be prevented. If severe arcing occurs, remove the AC power immediately and determine the cause by visual inspection (incorrect installation, cracked or melted high voltage harness, poor soldering, etc.). To maintain the proper minimum level of soft X-Ray emission, components in the high voltage circuitry including the picture tube must be the exact replacements or alternatives approved by the manufacturer of the complete product.
7. Do not check high voltage by drawing an arc. Use a high voltage meter or a high voltage probe with a VTVM. Discharge the picture tube before attempting meter connection, by connecting a clip lead to the ground frame and connecting the other end of the lead through a 10kΩ 2W resistor to the anode button.
8. When service is required, observe the original lead dress. Extra precaution should be given to assure correct lead dress in the high voltage circuit area. Where a short circuit has occurred, those components that indicate evidence of overheating should be replaced. Always use the manufacturer's replacement components.
9. **Isolation Check**  
**(Safety for Electrical Shock Hazard)**  
After re-assembling the product, always perform an isolation check on the exposed metal parts of the cabinet (antenna terminals, video/ audio input and output terminals, Control knobs, metal cabinet, screw heads, earphone jack, control shafts, etc.) to be sure the product is safe to operate without danger of electrical shock.
  - (1) **Dielectric Strength Test**  
The isolation between the AC primary circuit and all metal parts exposed to the user, particularly any exposed metal part having a return path to the chassis should withstand a voltage of 3000V AC (r.m.s.) for a period of one second.  
(... Withstand a voltage of 1100V AC (r.m.s.) to an appliance rated up to 120V, and 3000V AC (r.m.s.) to an appliance rated 200V or more, for a period of one second.)  
This method of test requires a test equipment not generally found in the service trade.
  - (2) **Leakage Current Check**  
Plug the AC line cord directly into the AC outlet (do not use a line isolation transformer during this check.). Using a "Leakage Current Tester", measure the leakage current from each exposed metal part of the cabinet, particularly any exposed metal part having a return path to the chassis, to a known good earth ground (water pipe, etc.). Any leakage current must not exceed 0.5mA AC (r.m.s.). However, in tropical area, this must not exceed 0.2mA AC (r.m.s.).  
**● Alternate Check Method**  
Plug the AC line cord directly into the AC outlet (do not use a line isolation transformer during this check.). Use an AC voltmeter having 1000 ohms per volt or more sensitivity in the following manner. Connect a 1500Ω 10W resistor paralleled by a 0.15μF AC-type capacitor between an exposed metal part and a known good earth ground (water pipe, etc.). Measure the AC voltage across the resistor with the AC voltmeter. Move the resistor connection to each exposed metal part, particularly any exposed metal part having a return path to the chassis, and measure the AC voltage across the resistor. Now, reverse the plug in the AC outlet and repeat each measurement. Any voltage measured must not exceed 0.75V AC (r.m.s.). This corresponds to 0.5mA AC (r.m.s.). However, in tropical area, this must not exceed 0.3V AC (r.m.s.). This corresponds to 0.2mA AC (r.m.s.).

# FEATURES

- The TELETEXT SYSTEM has a built-in FASTEXT/WST System. [AV-29LS, AV-29LS-AU, AV-2908TEE]
- New chassis design enables use of an interactive on-screen control.
- Pure flat CRT produces fine textured picture in every detail.
- Wide range voltage (110V ~ 240V) for AC power input.
- With AUDIO/VIDEO/S-VIDEO/COMPONENT input terminals. (S-VIDEO : AV-29LS-AU, AV-29LX-AU)
- I<sup>2</sup> C bus control utilizes single chip ICs.
- By means of AUTO PROGRAM, the TV stations can be selected automatically and the TV channels can also be rearranged automatically.
- Built-in DIGITAL ECO MODE (ECONOMY, ECOLOGY)  
In accordance with the brightness in a room, the brightness and/or contrast of the picture can be adjusted automatically to make the optimum picture which is easy on the eye.
- Built-in ON TIMER & RETURN +.

RM-C357-1C  
[AV-29LX, AV-29LX-A, AV-29LX-AU]

# SPECIFIC SERVICE INSTRUCTIONS

## DISASSEMBLY PROCEDURE

### REMOVING THE REAR COVER

1. Unplug the power supply cord.
2. Remove the 16 screws marked (A) as shown in Fig.1.
3. Withdraw the REAR COVER toward you.

#### [CAUTION]

- When reinstalling the rear cover, carefully push it inward after inserting the MAIN PWB into the rear cover groove.

### REMOVING THE CHASSIS (CHASSIS BASE AND CONTROL BASE)

- After removing the rear cover.
1. Slightly raise the both sides of the chassis by hand and remove the 2 claws marked (B) under the chassis from the front cabinet as shown in Fig.1.
  2. Withdraw the chassis backward.

(If necessary, take off the wire clamp, connector's etc.)

\* When conducting a check with power supplied, be sure to confirm that the CRT earth wire is connected to the CRT SOCKET PWB and the MAIN PWB.

### CHECKING THE MAIN PW BOARD

1. To check the back side of the MAIN PW Board.
  - 1) Pull out the chassis. (Refer to REMOVING THE CHASSIS).
  - 2) Erect the chassis vertically so that you can easily check the back side of the MAIN PW Board.

#### [CAUTION]

- When erecting the chassis, be careful so that there will be no contacting with other PW Board.
- Before turning on power, make sure that the CRT earth wire and other connectors are properly connected.
- When repairing, connect the Deg. coil to the DEG. connector on the Main PW Board.

### WIRE CLAMPING AND CABLE TYING

1. Be sure to clamp the wire.
2. Never remove the cable tie used for tying the wires together. Should it be inadvertently removed, be sure to tie the wires with a new cable tie.

### REMOVING THE AV TERMINAL BOARD

- After removing the rear cover.
1. Remove the 4 screws marked (C) as shown in Fig.1.
  2. When you pull out the AV TERMINAL BOARD in the direction of arrow marked (D) as shown in Fig.1, it can be removed.

### REMOVING THE CONTROL BASE

- After removing the rear cover and the chassis.
1. While pushing down the 2 claws maked (E) as shown in Fig. 2.
  2. When you pull out the CONTROL BASE in the direction of arrow maked (F) as shown in Fig. 2.  
(If necessary, take off the wire, connector's etc.)

### REMOVING THE SPEAKER

- After removing the rear cover.
1. Remove the 4 screws marked (G) as shown in Fig.1.
  2. Withdraw the speaker backward.
  3. Follow the same steps when removing the other hand speaker.

Fig.1

Fig.2

## REMOVING THE CRT

\* Replacement of the CRT should be performed by 2 or more persons.

- After removing the rear cover, chassis etc.,
  - 1. Putting the CRT change table on soft cloth, the CRT change table should also be covered with such soft cloth (shown in Fig. 2).
  - 2. While keeping the surface of CRT down, mount the TV set on the CRT change table balanced will as shown in Fig. 3.
  - 3. Remove 4 screws marked by arrows with a box type screwdriver as shown in Fig. 3.
  - Since the cabinet will drop when screws have been removed, be sure to support the cabinet with hands.
  - 4. After 4 screws have been removed, put the cabinet slowly on cloth (At this time, be carefully so as not to damage the front surface of the cabinet) shown in Fig. 4.
  - The CRT should be assembled according to the opposite sequence of its dismantling steps.
- \* The CRT change table should preferably be smaller than the CRT surface, and its height be about 35cm.

Fig. 2

Fig. 3

## COATING OF SILICON GREASE FOR ELECTRICAL INSULATION ON THE CRT ANODE CAP SECTION.

- Subsequent to replacement of the CRT and HV transformer or repair of the anode cap, etc. by dismantling them, be sure to coat silicon grease for electrical insulation as shown in Fig. 5.
- 1. Wipe around the anode button with clean and dry cloth. (Fig. 5)
- 2. Coat silicon grease on the section around the anode button. At this time, take care so that any silicon greases dose not sticks to the anode button. (Fig. 6)

★ Silicon grease product No. KS - 650N

Fig. 4

Fig. 5

Fig. 6

## REPLACEMENT OF MEMORY IC

### 1. MEMORY IC

This TV uses the following memory IC.

#### Memory IC: IC1702 on MAIN PW Board

The memory IC memorizes data for correctly operating the video and deflection circuits. When replacing the memory IC, be sure to use the same type IC written with the initial values of data. In other words, use the specific IC listed in "PRINTED WIRING BOARD PARTS LIST". For its mounting location, refer to "ADJUSTMENT LOCATIONS".

### 2. PROCEDURE FOR REPLACING MEMORY IC

#### (1) Power off

Switch the power off and unplug the power cord from the wall outlet.

#### (2) Replacing the memory IC

Replace the memory IC with new one. Be sure to use the memory IC written with the initial data values.

#### (3) Power on

Plug the power cord into the wall outlet and switch the power on.

#### (4) Check and setting of SYSTEM CONSTANT SET:

- 1) Press the DISPLAY key and the PICTURE MODE key on the remote control unit simultaneously.  
The SERVICE MENU screen will be displayed. (See Fig.1.)
- 2) In the SERVICE MENU, press the DISPLAY key and PICTURE MODE key simultaneously. Then, the SYSTEM CONSTANT SET screen will be displayed. (See Fig.2.)
- 3) Check whether the setting values of the SYSTEM CONSTANT SET are the same as those indicated in Table 1.  
If the value is different, select the setting item with the MENU  $\nabla/\Delta$  key, and set the correct value with the MENU  $\rightarrow/\leftarrow$  key.
- 4) Press the DISPLAY key twice to return to the normal screen.

#### (5) Receive channel setting

Refer to the **OPERATING INSTRUCTIONS** and set the receive channels (channels preset).

#### (6) User setting

Check the user setting values in Table 2, and if setting value is different, set the correct value.

For setting, refer to the **OPERATING INSTRUCTIONS**.

#### (7) Setting of SERVICE MENU

Verify the setting for each setting item in the SERVICE MENU. (See Table 3.) If readjustment is necessary, perform adjustment referring to "SERVICE ADJUSTMENTS".

# REPLACEMENT OF CHIP COMPONENT

## ■ CAUTIONS

1. Avoid heating for more than 3 seconds.
2. Do not rub the electrodes and the resist parts of the pattern.
3. When removing a chip part, melt the solder adequately.
4. Do not reuse a chip part after removing it.

## ■ SOLDERING IRON

1. Use a high insulation soldering iron with a thin pointed end of it.
2. A 30w soldering iron is recommended for easily removing parts.

## ■ REPLACEMENT STEPS

### 1. How to remove Chip parts

#### ◆ Resistors, capacitors, etc.

- (1) As shown in the figure, push the part with tweezers and alternately melt the solder at each end.

- (2) Shift with tweezers and remove the chip part.

#### ◆ Transistors, diodes, variable resistors, etc.

- (1) Apply extra solder to each lead.

- (2) As shown in the figure, push the part with tweezers and alternately melt the solder at each lead. Shift and remove the chip part.

*Note : After removing the part, remove remaining solder from the pattern.*

### 2. How to install Chip parts

#### ◆ Resistors, capacitors, etc.

- (1) Apply solder to the pattern as indicated in the figure.

- (2) Grasp the chip part with tweezers and place it on the solder. Then heat and melt the solder at both ends of the chip part.

#### ◆ Transistors, diodes, variable resistors, etc.

- (1) Apply solder to the pattern as indicated in the figure.
- (2) Grasp the chip part with tweezers and place it on the solder.
- (3) First solder lead **A** as indicated in the figure.

- (4) Then solder leads **B** and **C**.

# SERVICE ADJUSTMENTS

## ADJUSTMENT PREPARATION:

1. You can make the necessary adjustments for this unit with either the remote control unit or with the adjustment equipment and parts as given below.
2. Adjustment with the remote control unit is made on the basis of the initial setting values, however, the new setting values which set the screen to its optimum condition may differ from the initial settings.
3. Make sure that AC power is turned on correctly.
4. Turn on the power for the set and test equipment before use, and start the adjustment procedures after waiting at least 30 minutes.
5. Unless otherwise specified, prepare the most suitable reception or input signal for adjustment.
6. Never touch any adjustment parts, which are not specified in the list for this adjustment-variable resistors, transformers, capacitors, etc.
7. Presetting before adjustment.

Unless otherwise specified in the adjustment instructions, preset the following functions with the remote control unit.

- User mode setting position

Setting item	Setting value
PICTURE MODE(VSM)	BRIGHT
VNR	OFF
BASS,TREBLE,BALANCE	CENTRE
TINT,COLOUR,BRIGHT,CONT,SHARP	CENTRE

## MEASURING INSTRUMENT

1. DC voltmeter (or Digital voltmeter)
2. Oscilloscope
3. Signal generator (Pattern generator) [PAL/SECAM/NTSC]
4. Remote control unit

## ADJUSTMENT ITEMS

- B1 POWER SUPPLY
- FOCUS adjustment
- DELAY POINT adjustment
- VC (VIDEO/CHROMA) circuit board adjustment
  - WHITE BALANCE (Low light) adjustment
  - WHITE BALANCE (High light) adjustment
  - SUB BRIGHT adjustment
  - SUB CONT adjustment
  - SUB COLOUR adjustment
  - SUB TINT adjustment
- DEFLECTION circuit adjustment
  - VER. SLOPE adjustment
  - VER. POSITION adjustment
  - V. ZOOM adjustment
  - HOR. POSITION adjustment
  - HOR. WIDTH adjustment
  - EW-PIN adjustment
  - EW-TRAPEZ adjustment
  - VER. SCURVE adjustment
  - UP CORNER and DW CORNER adjustment
  - HOR. PARALL adjustment
  - HOR. BOW adjustment
- VSM PRESET adjustment
- PRESET adjustment
- AUDIO adjustment
- PURITY and CONVERGENCE adjustments
  - PURITY adjustment
  - STATIC CONVERGENCE adjustment
  - DYNAMIC CONVERGENCE adjustment

## BASIC OPERATION IN SERVICE MENU

### 1. TOOL OF SERVICE MENU OPERATION

Operate the SERVICE MENU with the remote control unit.

### 2. SERVICE MENU ITEMS

With the SERVICE MENU, various settings (adjustments) can be made, and they are broadly classified in the following items of settings:

- 1. IF ..... For entering/adjusting the setting values (adjustment values) of the IF circuit.
- 2. VC ..... For entering/adjusting the setting values (adjustment values) of the VIDEO/CHROMA circuit.
- 3. DEF ..... For entering/adjusting the setting values (adjustment values) of the DEFLECTION circuit.
- 4. VSM PRESET ..... For setting the values of STANDARD, SOFT and BRIGHT  
(VSM: video status memory)
- 5. PRESET ..... For setting the values of the pteset.
- 6. AUDIO ..... For entering/adjusting the setting values (adjustment values) of the multiplicity sound circuit.  
[Only AV-29LS/LS-AU/LH]
- 6/7. PLUG & PLAY (OFF) .. This is not used for service.

### 3. BASIC OPERATION IN SERVICE MENU

#### (1) How to enter SERVICE MENU

Press the DISPLAY key and the PICTURE MODE key on the remote control unit simultaneously.

The SERVICE MENU screen will be displayed. (See Fig. 1 on the next page.)

#### (2) Selection of SUB MENU SCREEN

Press one of the keys 1 to 7 on the remote control unit, and select the SUB MENU SCREEN from the SERVICE MENU. (See Fig. 1 on the next page.)

SERVICE MENU → SUB MENU	1. IF
	2. VC
	3. DEF
	4. VSM PRESET
	5. PRESET
	6. AUDIO [Only AV-29LS/LS-AU/LH]
	6/7. PLUG & PLAY (OFF)

#### (3) Method of Setting

\*Once the setting values are set, they are memorized automatically.

\*It must not adjust without inputting a signal.

##### 1) 1. IF

[1. VCO]

This is not used for service.

[2. DELAY POINT]

- (a) 1 Key ..... Select **1. IF**
- (b) 2 Key ..... Select **2. DELAY POINT**.
- (c) MENU  $\nabla/\Delta$  Key ..... Adjust the setting value.
- (d) DISPLAY Key ..... When this is pressed twice, you will return to the SERVICE MENU.

##### 2) 2. VC, 3. DEF, 4. VSM PRESET, 5. PRESET and 6. AUDIO

- (a) 2 ~ 6 Keys ..... Select one from 2. VC, 3. DEF, 4. VSM PRESET, 5. PRESET and 6. AUDIO.
- (b) MENU  $\nabla/\Delta$  key ..... Select setting items.
- (c) MENU  $\nabla/\Delta$  Key ..... Adjust the setting values of the setting items.
  - Use the number keys on the remote control unit for setting of WHITE BALANCE.  
For the setting, refer to each item concerned.
- (d) DISPLAY Key ..... When this is pressed, you will return to the SERVICE MENU.

##### 3) 6/7. PLUG & PLAY (OFF)

This is not used for service.

#### (4) Release of SERVICE MENU

After completing the setting, return to the SERVICE MENU by pressing the DISPLAY key, then again press the DISPLAY key to return to the normal screen.

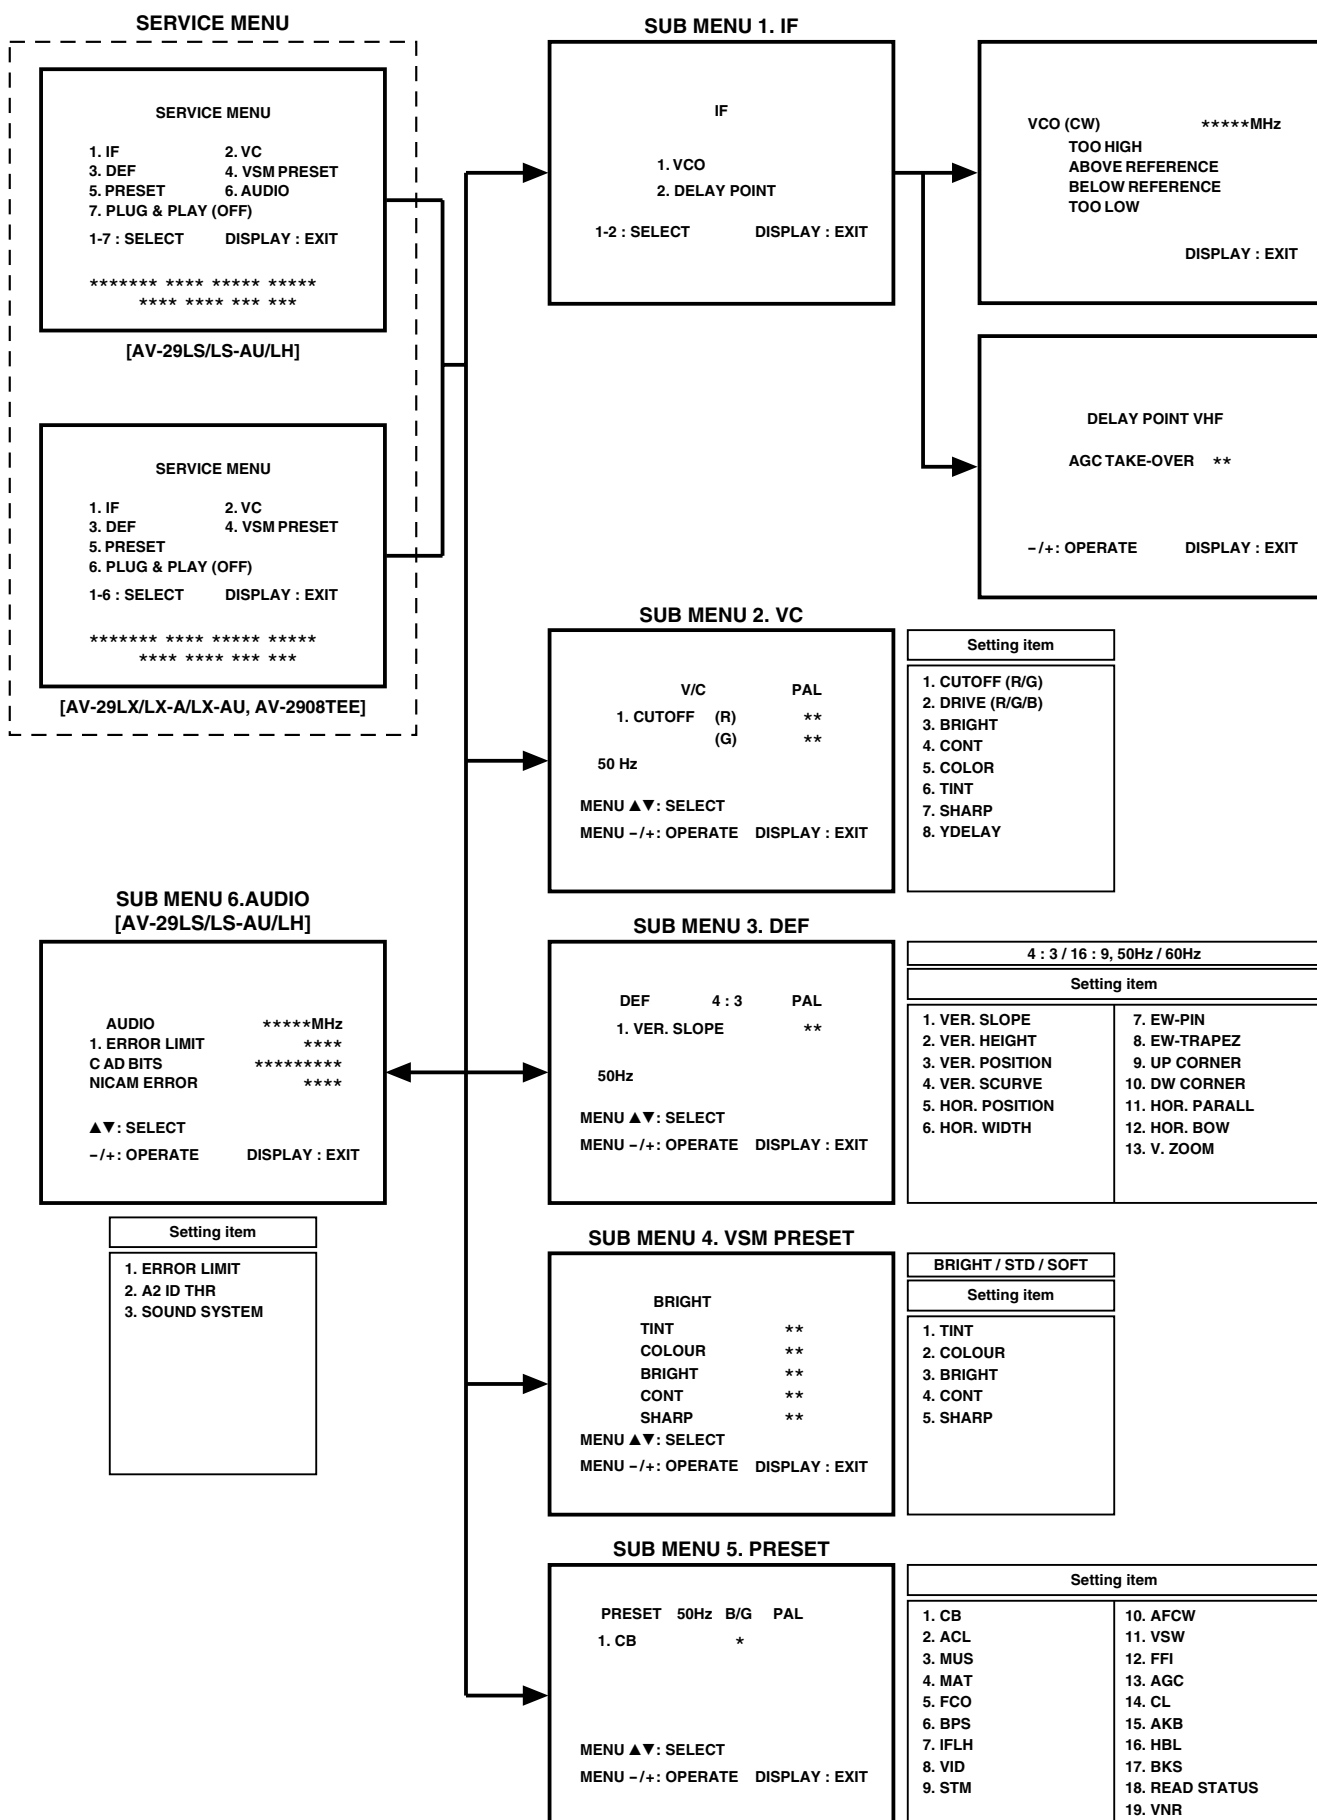

Fig. 1

## VC (VIDEO/CHROMA) CIRCUIT ADJUSTMENT

The setting (adjustment) using the remote control unit is made on the basis of the initial setting values.  
The setting values which adjust the screen to the optimum condition can be different from the initial setting values.  
● Do not change the initial setting values of the setting (adjustment) items not listed in "ADJUSTMENT".

[SUB MENU 2. VC]   : Do not adjust.

	Setting (Adjustment) item	Variable range	Initial setting value				
			PAL	SECAM	NTSC3.58	NTSC4.43	COMPONENT
1	CUTOFF(R/G)	-7 — +8	0	←	←	←	0
2	DRIVE(R/G/B)	-30 — +31	0	←	←	←	0

18	READ STATUS	—	—
19	VNR	00 – 63	25

## AUDIO ADJUSTMENT [AV-29LS, AV-29LS-AU, AV-29LH]

- Do not adjust 6. AUDIO (1.ERROR LIMIT, 2.A2 ID THR, 3.SOUND SYSTEM) in the SERVICE MENU as it requires no adjustment.

### [SUB MENU 6. AUDIO]

Setting item	Variable range	Initial setting value (fixed)
1. ERROR LIMIT (Do not adjust.)	000H — FF0H	100H
2. A2 ID THR (Do not adjust.)	00H — FFH	0AH
3. SOUND SYSTEM (Do not adjust.)	—	—

## PURITY AND CONVERGENCE ADJUSTMENTS

**Note:** The final adjustment of CONVERGENCE must be done after the FOCUS adjustment. (CONVERGENCE is changed by FOCUS adjustment.)

When makes difference by FOCUS adjustment, should be reconfirming PURITY adjustment.

### PURITY ADJUSTMENT

1. Demagnetize CRT with the demagnetizer.
2. Loosen the retainer screw of the deflection yoke.
3. Remove the wedges.
4. Input a green raster signal from the signal generator, and turn the screen to green raster.
5. Move the deflection yoke backward.
6. Bring the long lug of the purity magnets on the short lug and position them horizontally. (Fig. 2)
7. Adjust the gap between two lugs so that the GREEN RASTER will come into the centre of the screen. (Fig. 3)
8. Move the deflection yoke forward, and fix the position of the deflection yoke so that the whole screen will become green.
9. Insert the wedge to the top side of the deflection yoke so that it will not move.
10. Input a crosshatch signal.
11. Verify that the screen is horizontal.
12. Input red and blue raster signals, and make sure that purity is properly adjusted.

#### • P/C MAGNETS

P : PURITY MAGNET  
4 : 4 POLES (convergence magnets)  
6 : 6 POLES (convergence magnets)

Fig. 1

Fig. 2

Fig. 3

## STATIC CONVERGENCE ADJUSTMENT

1. Input a crosshatch signal.
2. Using 4-pole convergence magnets, overlap the red and blue lines in the centre of the screen (Fig. 4) and turn them to magenta (red/blue).
3. Using 6-pole convergence magnets, overlap the magenta (red/blue) and green lines in the centre of the screen and turn them to white.
4. Repeat 2 and 3 above, and make best convergence.

## DYNAMIC CONVERGENCE ADJUSTMENT

1. Move the deflection yoke up and down and overlap the lines in the periphery. (Fig. 5)
  2. Move the deflection yoke left to right and overlap the lines in the periphery. (Fig. 6)
  3. Repeat 1 and 2 above, and make best convergence.
- After adjustment, fix the wedge at the original position.  
Fasten the retainer screw of the deflection yoke.  
Fix the 6 magnets with glue.

Fig. 4

Fig. 5

Fig. 6

## SELF-CHECK FUNCTIONS

### 1. Outline

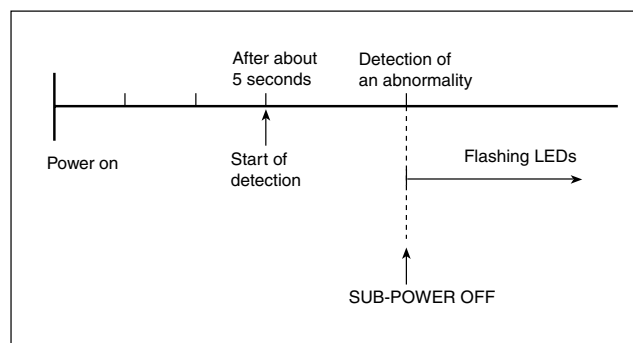

This model has self-check functions given below. When an abnormality has been detected, the SUB POWER is turned off and both ECO and ON TIMER LEDs flash to inform of the failure. An abnormality is detected by the signal input state of the control line connected to the microcomputer.

### 2. Self check items

Check item	Details of detection	Method of detection	State of abnormality
Over-current protection	An over-current on the low B line is detected.	The main microcomputer detects the possible abnormality at 30-msec.intervals and judges the results in every 16 time. Of the 16 times, if NG is detected more than 9 times, it is judged that there is an abnormality.	When an abnormality has been detected, the SUB-POWER is turned off. While the SUB-POWER is being turned off, the POWER key on the remote control unit is not operational until the power cord is taken out and put in again.
CRT NECK protection	Operation of CRT NECK protection circuit	DITTO	DITTO

### 3. Self check indicating function

When an abnormality has been detected at about 5 seconds after the power is turned on, the SUB POWER is turned off immediately and the LEDs flash.

#### [ Indication by the LEDs]

Item	LEDs flashing intervals	Priority of detection
① Over-current protection	At 0.2-second intervals	1
② CRT NECK protection	At 1-second intervals	2

**Note:** In case of ① + ②, the item ① is indicated.

# STANDARD CIRCUIT DIAGRAM

## ■ NOTE ON USING CIRCUIT DIAGRAMS

### 1. SAFETY

The components identified by the  symbol and shading are critical for safety. For continued safety replace safety critical components only with manufactures recommended parts.

### 2. SPECIFIED VOLTAGE AND WAVEFORM VALUES

The voltage and waveform values have been measured under the following conditions.

- (1) Input signal : Colour bar signal
- (2) Setting positions of each knob/button and variable resistor : Original setting position when shipped
- (3) Internal resistance of tester : DC 20kΩ/V
- (4) Oscilloscope sweeping time : H ⇒ 20μS/div  
: V ⇒ 5mS/div  
: Others ⇒ Sweeping time is specified.
- (5) Voltage values : All DC voltage values

\* Since the voltage values of signal circuit vary to some extent according to adjustments, use them as reference values.

### 3. INDICATION OF PARTS SYMBOL [EXAMPLE]

- In the PW board : R1209 → R209

### 4. INDICATIONS ON THE CIRCUIT DIAGRAM

#### (1) Resistors

##### ● Resistance value

- No unit : [Ω]
- k : [kΩ]
- M : [MΩ]

##### ● Rated allowable power

- No indication : 1/16 [W]
- Others : As specified

##### ● Type

- No indication : Carbon resistor
- OMR : Oxide metal film resistor
- MFR : Metal film resistor
- MPR : Metal plate resistor
- UNFR : Non-Flammable resistor
- FR : Fusible resistor

\* Composition resistor 1/2 [W] is specified as 1/2S or Comp.

#### (2) Capacitors

##### ● Capacitance value

- 1 or higher : [pF]
- less than 1 : [μF]

##### ● Withstand voltage

- No indication : DC50[V]
- AC indicated : AC withstand voltage [V]
- Others : DC withstand voltage [V]

\* Electrolytic Capacitors

47/50[Example] : Capacitance value [μF]/withstand voltage[V]

##### ● Type

- No indication : Ceramic capacitor
- MY : Mylar capacitor
- MM : Metalized mylar capacitor
- PP : Polypropylene capacitor
- MPP : Metalized polypropylene capacitor
- MF : Metalized film capacitor
- TF : Thin film capacitor
- BP : Bipolar electrolytic capacitor
- TAN : Tantalum capacitor

### (3) Coils

- No unit : [μH]
- Others : As specified

### (4) Power Supply

-  : B1
-  : B2(12V)
-  : 9V
-  : 5V

\* Respective voltage values are indicated

### (5) Test point

-  : Test point
-  : Only test point display

### (6) Connecting method

-  : Connector
-  : Wrapping or soldering
-  : Receptacle

### (7) Ground symbol

-  : LIVE side ground
-  : ISOLATED(NEUTRAL) side ground
-  : EARTH ground
-  : DIGITAL ground

## 5. NOTE FOR REPAIRING SERVICE

This model's power circuit is partly different in the GND. The difference of the GND is shown by the LIVE : (  ) side GND and the ISOLATED(NEUTRAL) : (  ) side GND. Therefore, care must be taken for the following points.

- (1) Do not touch the LIVE side GND or the LIVE side GND and the ISOLATED(NEUTRAL) side GND simultaneously. If the above caution is not respected, an electric shock may be caused. Therefore, make sure that the power cord is surely removed from the receptacle when, for example, the chassis is pulled out.
- (2) Do not short between the LIVE side GND and ISOLATED(NEUTRAL) side GND or never measure with a measuring apparatus ( oscilloscope, etc.) the LIVE side GND and ISOLATED(NEUTRAL) side GND at the same time. If the above precaution is not respected , a fuse or any parts will be broken.

● Since the circuit diagram is a standard one, the circuit and circuit constants may be subject to change for improvement without any notice.

**CRT SOCKET PW BOARD ASS'Y(SCH-3001A-H2)**

Parts list is the same as for AV-29LS. Refer to page 45 .

**FRONT CONTROL PW BOARD ASS'Y(SCH-8001A-H2)**

Parts list is the same as for AV-29LS. Refer to page 46.

## DIFFERENCE PARTS LIST BETWEEN AV-29LX, AV-29LX-A, AV-29LX-AU AND AV-2908TEE

In the DIFFERENCE PARTS LIST BETWEEN AV-29LX, AV-29LX-A, AV-29LX-AU and AV-2908TEE, only difference points between these models are written. For other parts not mentioned in the list, please refer to the PARTS LIST(P49 – P52) for the AV-29LX.
